[1] Includes distribution to Unknown consumers.
[2] Includes distribution to the transportation sector.
[3] Includes distribution to both the transportation sector and unknown consumers.
* Quantity is less than 500 short tons or percent is less than .05.
Note: Total may not equal sum of components becuase of independent rounding.

Sources: Foreign distributions of U.S. metallurgical and steam coal by exporting State and country of destination are estimated by the EIA based upon information collected on the Form IEA-6A, Coal Distribution Report, and coal export data from COALBASE (Energy Publishing LLC, Knoxville, Tennessee). Ratios representing percentages of metallurgical and steam coal of each origin State and country of destination reported in COALBASE are applied to the IEA-6A foreign distribution national total to derive foreign distribution estimates. Estimates aggregated to the State level in this table can differ from the State-level estimates of foreign distribution in the table entitle: "Domestic and Foreign Distribution of U.S. Coal by State of Origin," which obtains all of its data from Form IEA-6A.
