

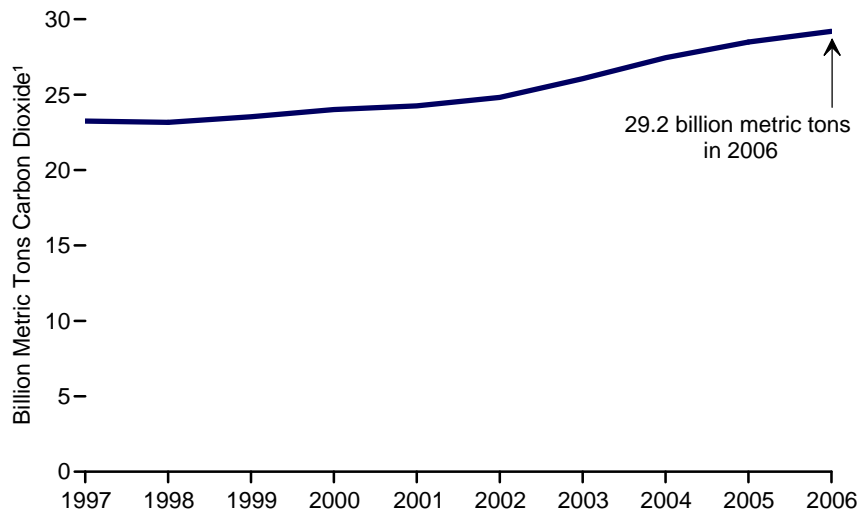

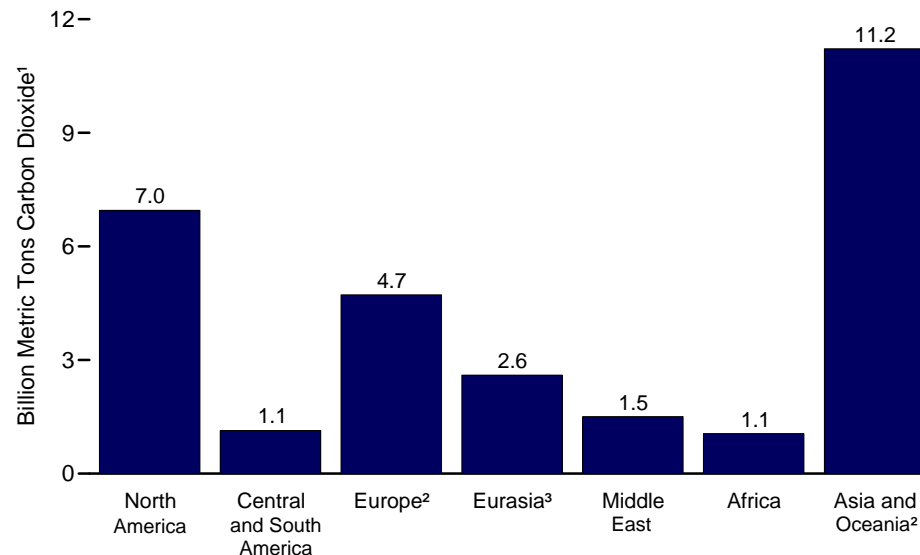

Figure 11.19 World Carbon Dioxide Emissions From Energy Consumption

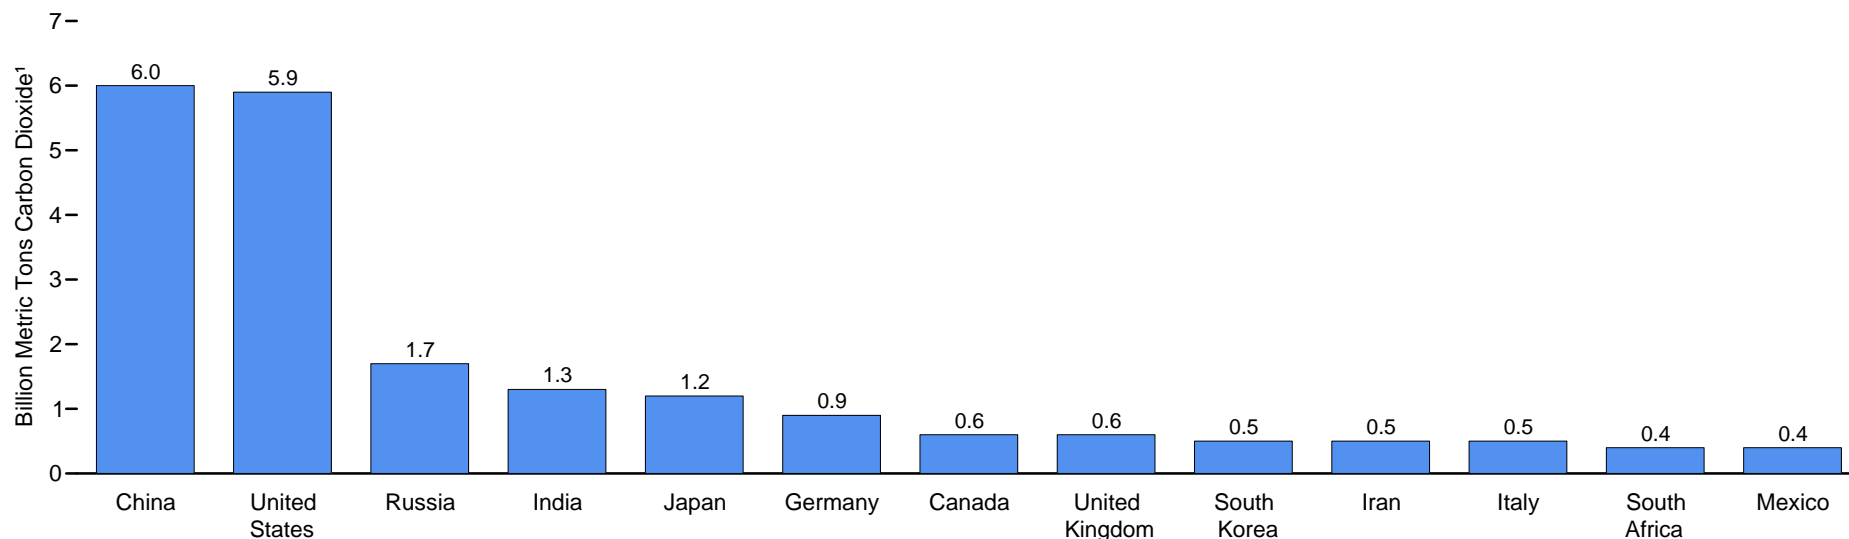

World, 1997-2006

World by Region, 2006

Top Countries, 2006

¹ Metric tons of carbon dioxide can be converted to metric tons of carbon equivalent by multiplying by 12/44.

² Excludes countries that were part of the former U.S.S.R. See "U.S.S.R." in Glossary.

³ Includes countries that were part of the former U.S.S.R. See "U.S.S.R." in Glossary.

Note: Data include carbon dioxide emissions from fossil-fuel energy consumption and natural gas venting and flaring.
