Energy Information Administration, Office of Integrated Analysis and Forecasting. Energy Information Administration, Analysis of S.1844, the Clear Skies Act of 2003; S.843, the Clean Air Planning Act of 2003; and S.366, the Clean Power Act of 2003, SR/OIAF/2004-05 (Washington, DC, May 2005), web site [www.eia.doe.gov/oiaf/servicerpt/csa/pdf/sroiaf\(2004\)05.pdf](http://www.eia.doe.gov/oiaf/servicerpt/csa/pdf/sroiaf(2004)05.pdf). Notes: The limits on NOx emissions under S.1844 are split between two regions: 1.47 million tons in Zone 1 (the East) in 2008 to 2017 and 0.72 million tons in Zone 2 (the West) from 2008 through 2017; and 1.07 million tons in Zone 1 and 0.72 million tons in Zone 2 in 2018. The 2009 limit on SO2 emissions under S. 366 is split between two regions: 0.275 million tons in the West and 1.975 million tons in the other regions. Under S. 366, minimum facility-specific reductions of mercury emissions without trading are required in 2008. Under S.843, minimum facility-specific reductions of mercury emissions between 50 percent (2009 to 2012) and 70 percent (after 2012) are required. Under S.366, the 2009 limit on CO2 emissions from the electricity sector is the estimated 1990 emissions level. Under S.843, the 2009 to 2012 limit on CO2 emissions is based on EIA's AEO2004 projection of 2006 emissions, and the limit for 2013 and subsequent years is based on the estimated 2001 emissions level.
