

**Table 20. Weather Summary, Selected U.S. Cities**  
 (Population Weighted Heating Degree-Days<sup>1</sup>)

Weather data reported in the *Weekly Petroleum Status Report* are taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce. The National Oceanic and Atmospheric Administration (NOAA)/NWS, as a U.S. Government Agency, does not endorse any consumer information services.

The weather for the Nation, as measured by population-weighted heating degree-days from July 1, 2000, through November 4, 2000, has been 4 percent warmer than last year and 7 percent warmer than normal.

Location	Current 07/01/00 thru 11/04/00	Previous 07/01/99 thru 11/04/99	Normal 07/01 thru 11/04	Percent Change	
				Current vs. Previous	Current vs. Normal
U.S. Total, Population-Weighted	386	404	414	-4	-7
Cities

<sup>1</sup>See Glossary.

\*\*\* = Normal heating degree-days or less, or ratio incalculable.

Note:• The total heating degree-days for the previous heating season (July 1, 1999 - June 30, 2000) was 4,062 and the normal is 4,575. • A new method for calculating heating/cooling degree days was implemented by the Climate Analysis Center in October 1993, with further refinements implemented in November 1993. The routines incorporate 1961-1990 normals supplied by the National Climatic Data Center, and 1990 census data for calculation of population weighted degree days.
