

Table 20. Weather Summary, Selected U.S. Cities
(Population Weighted Heating Degree-Days¹)

Weather data reported in the *Weekly Petroleum Status Report* are taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce. The National Oceanic and Atmospheric Administration (NOAA)/NWS, as a U.S. Government Agency, does not endorse any consumer information services.

The weather for the Nation, as measured by population-weighted heating degree-days from July 1, 2000, through November 11, 2000, has been 4 percent cooler than last year and 4 percent warmer than normal.

Location	Current 07/01/00 thru 11/11/00	Previous 07/01/99 thru 11/11/99	Normal 07/01 thru 11/11	Percent Change	
				Current vs. Previous	Current vs. Normal
U.S. Total, Population-Weighted	498	480	519	4	-4
Cities					
Albuquerque	574	340	464	69	24

¹See Glossary.

*** = Normal heating degree-days or less, or ratio incalculable.

Note:• The total heating degree-days for the previous heating season (July 1, 1999 - June 30, 2000) was 4,062 and the normal is 4,575. • A new method for calculating heating/cooling degree days was implemented by the Climate Analysis Center in October 1993, with further refinements implemented in November 1993. The routines incorporate 1961-1990 normals supplied by the National Climatic Data Center, and 1990 census data for calculation of population weighted degree days.
