

Table 20. Weather Summary, Selected U.S. Cities
(Population Weighted Cooling Degree-Days¹)

Weather data reported in the *Weekly Petroleum Status Report* are taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce. The National Oceanic and Atmospheric Administration (NOAA)/NWS, as a U.S. Government Agency, does not endorse any consumer information services.

The weather for the Nation, as measured by population-weighted cooling degree-days from July 1, 2000, through June 9, 2001, has been 4 percent cooler than last year and 13 percent warmer than normal.

Location	Current 01/01/01 thru 06/09/01	Previous 01/01/00 thru 06/09/00	Normal 01/01 thru 06/09	Percent Change	
				Current vs. Previous	Current vs. Normal
U.S. Total, Population-Weighted	230	240	204	-4	13

¹See Glossary.

*** = Normal cooling degree-days or less, or ratio incalculable.

Note: • The total cooling degree-days for the previous cooling season (January 1, 2000 - December 31, 2000) was 1,252 and the normal is 1,192. • A new method for calculating heating/cooling degree days was implemented by the Climate Analysis Center in October 1993, with further refinements implemented in November 1993. The routines incorporate 1961-1990 normals supplied by the National Climatic Data Center, and 1990 census data for calculation of population weighted degree days.
