(a) The Bureau of the Census classifies establishments using the North American dustry Classification System (NAICS)
(b) 'Alternative Energy Sources' consist of those energy sources that could have been substituted for LPG during 2006. The quantities are expressed in housands of barrels, and therefore represent the quantity of LPG that could have been displaced by the given alternative type of energy.
(c) 'Total Consumed' represents those quantities (Total Inputs) of LPG that wer scertained switchable or not switchable, plus an additional quantity for which (d) 'Electicity Receips'
anerated off the manufacturing establishe quanties of electricity
ishment site and available at the site for年sumption. It includes those quantities for which payment was made, purchasing entity, and quantities for which payment was made in kind. It does not include electricity generated onsite. 'Electricity Receipts' has not been adjusted to account for any quantities that might have been resold or transferred out. The estimates include those quantities that were ascertained switchable or not switchable, plus an additional quantity for which the witching status was not ascertained
(e) 'Other' includes all other types of energy not already identified that
respondents indicated could have been consumed in place of LPG.
(f) Value of Shipments and Receipts and Employment Size categories were vplied by the Bureau of the Census.
Level: National Data and Regional Totals
Row: NAICS Codes, Value of Shipments and Employment Sizes;
Column: Energy Sources
Unit: Thousand Barrels.

NF=No applicable RSE row/column factor.
Estimate less than 0.5
=Withheld to avoid disclosing data for individual establishments.
$\mathrm{Q}=$ Withheld because Relative Standard Error is greater than 50 percent.
NA=Not available.
Notes: To obtain the RSE percentage for any table cell, multiply the cell's corresponding RSE column and RSE row factors. Totals may not equal sum of components because of independent rounding
Source: Energy Information Administration, Office of Energy Markets Energy Consumption Survey,' and the Bureau of the Census, data files for the '2006 Annual Survey of Manufacturers.'

(a) The Bureau of the Census classifies establishments using the North American Industry Classification System (NAICS).
dustry Classification System (NAICS).
(b) 'Alternative Energy Sources' consist of those energy sources that could have been substituted for LPG during 2006. The quantities are expressed in thousands of barrels, and therefore represent the quantity of LPG that could have been displaced by the given alternative type of energy.
(c) 'Total Consumed' represents those quantities (Total Inputs) of LPG that wer scertained switchable or not switchable, plus an additional quantity for which not ascertained.
enerated off the manufacturing establishment site and available at the site for consumption. It includes those quantities for which payment was made,
quantities transferred in, quantities purchased and paid for by a central
purchasing entity, and quantities for which payment was made in kind. It does tinclude electricity generated onsite. 'Electricity Receipts' has not be asferred out. The estimates include those quantities that were witchable or not switchable, plus an additional quantity for which the switching status was not ascertained.
(e) 'Other' includes all other types of energy not already identified that
espondents indicated could have been consumed in place of LPG.
(f) Value of Shipments and Receipts and Employment Size categories were NF=N by the Burea RSE Census.
*Estimate less than 0.5.
$\mathrm{W}=\mathrm{With} h e l d$ to avoid disclosing data for individual establishments.
$\mathrm{Q}=$ Withheld because Relative Standard Error is greater than 50 percent.
NA=Not available.
$\mathrm{X}=$ Not defined because RSE corresponds to a value of zero
Notes: To obtain the RSE percentage for any table cell, multiply the cell's corresponding RSE column and RSE row factors. Totals may not equal sum of ents because of independent rounding
