(a) The Bureau of the Census classifies establishments using the North American

Industry Classification System (NAICS)
(b) These counts include only those establishments that reported this activity in 2006
(c) 'Alternative Energy Sources' consist of those energy sources that could
have been substituted for LPG during 2006. The quantities are expressed in
thousands of barrels, and therefore represent the quantity of LPG that could
have been displaced by the given alternative type quantity of
(d) 'Total Consumed' represents those quantities (Total Inputs) of LPG that were ascertained switchable or not switchable, plus an additional quantity for which the switching status was not ascertained

Electricity Receipts' represents those quantities of electricity
Eerated off the manufacturing estabishment site and available at the sit
consumption. It includes those quantities for which payment was made,
quantities transferred in, quantities purchased and paid for by a central
purchasing entity, and quantities for which payment was made in kind. It does adjusted to account for any quantities that might have been resold or transferred out. The estimates include those quantities that were as switchable or not switchable, plus an additional quantity for which the switching status was not ascertained.
(f) 'Other' includes all other types of energy not already identified that
respondents indicated could have been consumed in place of LPG.
NF=No applicable RSE

* Estimate less than 0.5
$\mathrm{W}=$ Withheld to avoid disclosing data for individual establishments.
$\mathrm{Q}=$ Withheld because Relative Standard Error is greater than 50 percent.
$\mathrm{NA}=\mathrm{Not}$ available.
Notes: To obtain the RSE percentage for any table cell, multiply the cell's corresponding RSE column and RSE row factors. Totals may not equal sum of components because of independent rounding.

Energy Consumption Divisin. Form EIA-846, of Energy Markets and En Consumption Survey.'
