## Table N1. Total world buildings delivered energy consumption by end-use sector and fuel, High Economic Growth case

quadrillion British thermal units

contex final		2025	2030	2035	2040	2045		Average annual percentage change, 2022–2050
	2022						2050	
sector_fuel	2022	2025	2030	2055	2040	2045	2050	2022-2030
Commercial buildings								
Coal	1.3	1.3	1.3	1.4	1.4	1.5	1.5	0.5%
Electricity	18.4	19.4	21.4	23.4	25.6	28.0	30.6	1.8%
Liquid fuels	3.5	3.6	3.8	3.9	4.1	4.2	4.4	0.8%
Natural gas	9.4	9.7	10.2	10.7	11.2	11.7	12.2	1.0%
Renewables	0.3	0.3	0.3	0.3	0.3	0.3	0.3	0.4%
Total	32.9	34.2	37.0	39.6	42.5	45.6	49.0	1.4%
Residential buildings								
Coal	3.6	3.5	3.4	3.3	3.3	3.2	3.1	-0.6%
Electricity	25.4	26.8	30.4	34.3	39.0	44.6	50.6	2.5%
Liquid fuels	9.4	9.5	10.1	10.6	11.1	11.7	12.3	1.0%
Natural gas	23.1	23.8	25.2	26.6	28.2	29.9	31.7	1.1%
Renewables	1.6	1.6	1.6	1.6	1.6	1.6	1.6	0.1%
Total	63.1	65.3	70.7	76.4	83.2	91.0	99.4	1.6%
Total buildings								
Coal	4.9	4.9	4.8	4.7	4.7	4.6	4.6	-0.2%
Electricity	43.8	46.2	51.9	57.6	64.6	72.6	81.2	2.2%
Liquid fuels	12.9	13.1	13.8	14.5	15.2	15.9	16.6	0.9%
Natural gas	32.5	33.5	35.4	37.3	39.3	41.6	44.0	1.1%
Renewables	1.9	1.8	1.8	1.8	1.9	1.9	1.9	0.1%
Total	96.0	99.5	107.7	116.0	125.7	136.6	148.4	1.6%

Note: Totals may not equal sum of components due to independent rounding. The commercial sector includes businesses, institutions, and service organizations. Most commercial energy use occurs in buildings or structures to provide space heating, water heating, lighting, cooking, and cooling. Energy consumed for services not associated with buildings, such as for traffic lights and city water and sewer services, is also categorized as commercial energy use. The residential sector includes households but excludes motor vehicle fuel consumption, which is covered in the transportation sector. Buildings electricity consumption and buildings delivered energy consumption do not include electrical system energy losses incurred in the generation, transmission, and distribution of electricity. Electricity-related losses include energy losses during generation due to thermal efficiency, energy losses during transmission and distribution, and parasitic load. In all regions except the United States, fuel consumption in buildings includes fuel used to produce district heat that is delivered to the residential and commercial sectors. We converted electricity generation from renewable sources such as hydroelectric, wind, or solar to British thermal units at a rate of 8,124 British thermal units per kilowatthour, which reflects the average projected conversion efficiency of the U.S. fossil-fueled generating fleet in the Annual Energy Outlook 2021 over the projection period (2022–2050).
